

## Introduction to Algebra 2 Contents

fat

March 14, 2024

| Week | Contents  |
|------|---|
| W1-1 | 9.1 Polynomial Rings, Degree, Reduction Homomorphism modulo $I$ , Monomial, Homogeneous Polynomials, 9.2 Polynomials over Fields, 9.3 Polynomial Rings that are UFDs, Gauss's Lemma(1),   |
| W1-2 | Gauss's Lemma Applications(2), 9.4 Irreducibility Criteria, Reduction Homomorphism, Eisenstein's Criterion, Cyclotomic Polynomial   |
| W2-2 | 9.5 Polynomial Rings over Fields, Construction of Finite Fields of $p^n$ Elements, CRT  |
| W3-1 | 13.1 Basics of Field Extensions(1), Characteristic, Prime Subfield, Extension Field and Base/Ground Field, Generated Subfields, Simple Extension, Primitive Element, Degree (of Field Extension), Finite Extension, Algebraic and Transcendental Numbers, Algebraic Extensions(1), Minimal Polynomial, Degree (of Minimal Polynomial) |
| W3-2 | 13.1 Basics of Field Extensions(2), Theorem 4+6( $F(\alpha) \simeq F[\alpha]$ ), Algebraic Extensions(2)  |
| W4-1 | Algebraic Extensions(3), Algebraic Closure, Composite, 13.4 Splitting Fields and Algebraic Closures   |
| W4-2 | Normal Extension, Isomorphism Theorems for Field Extensions& Splitting Fields (Theorem 8, 27)   |
| W5-1 | Algebraic Closure, Algebraically Closed, Separable/Inseparable Polynomials&Extensions, Derivative, Frobenius Endo/Automorphism  |
| W5-2 | Perfect Fields, Separable/Inseparable Degree, Separable Extensions, (Primitive)Roots of Unity, Cyclotomic Polynomials   |
